A PARTNERSHIP FOR SAFE CHEMICAL WEAPONS DESTRUCTION

Project Background

The Program Executive Officer, Assembled Chemical Weapons Alternatives (ACWA), headquartered at Aberdeen Proving Ground, Maryland, is responsible for managing all aspects of the safe and environmentally sound destruction of the chemical weapons stockpiles in Colorado and Kentucky.

Pueblo Chemical Agent-
Destruction Pilot Plant

The Pueblo Chemical Agent-Destruction Pilot Plant (PCAPP) will safely destroy 2,611 tons of mustard agent in mortar rounds and artillery projectiles stored at the U.S. Army Pueblo Chemical Depot (PCD).

- Neutralization followed by biotreatment is the technology selected by the Department of Defense to destroy the Pueblo chemical weapons stockpile.

The Bechtel Pueblo Team (BPT) is a partnership of Bechtel National, Inc., URS, Parsons, and Battelle Memorial Institute. The BPT functions as the systems contractor selected to design, build, systemize, pilot test, operate, and close the PCAPP.

Staffing

Bechtel Pueblo Team:
1,173

- Pueblo County local hires: 336
- Colorado hires (outside Pueblo County): 95
- From other locations: 739

Employment Opportunities

Hotline

(719)549-4003

Website

<http://pueblo.bechtel.com>

- Lost-workday case rate and total recordable injury rate (TRIR) is **0.08**
- The current TRIR for the YTD is well below the general industry average of **3.5** and the Waste Management Industry rate of **4.7**

*A Lost Time Recordable Injury occurred on Jan. 22, 2015 (**21 months** without a lost time injury or illness and **5.9 million hours** worked).

Step 1

Removal of Energetics

Robotic equipment removes energetics (explosives) from the weapon. The energetics will be disposed of at a permitted facility offsite.

Step 2

Removal of Mustard Agent

The inside of the weapon is remotely accessed and mustard agent is washed out with high-pressure water.

Step 3

Neutralization of Mustard Agent

The mustard agent is neutralized with caustic solution and hot water. The byproduct is called hydrolysate.

Step 4

Biotreatment

Microbes treat the hydrolysate, breaking it down into brine. The brine is separated with water being recycled back to the plant and salt cakes shipped for disposal at a permitted facility.

Step 5

Thermal Treatment and Disposal of Metal Parts

Metal Parts are heated to 1,000 degrees Fahrenheit for 15 minutes and can then be recycled.

Neutralization followed by biotreatment will be used to destroy the Colorado chemical weapons stockpile.

Explosive Destruction System

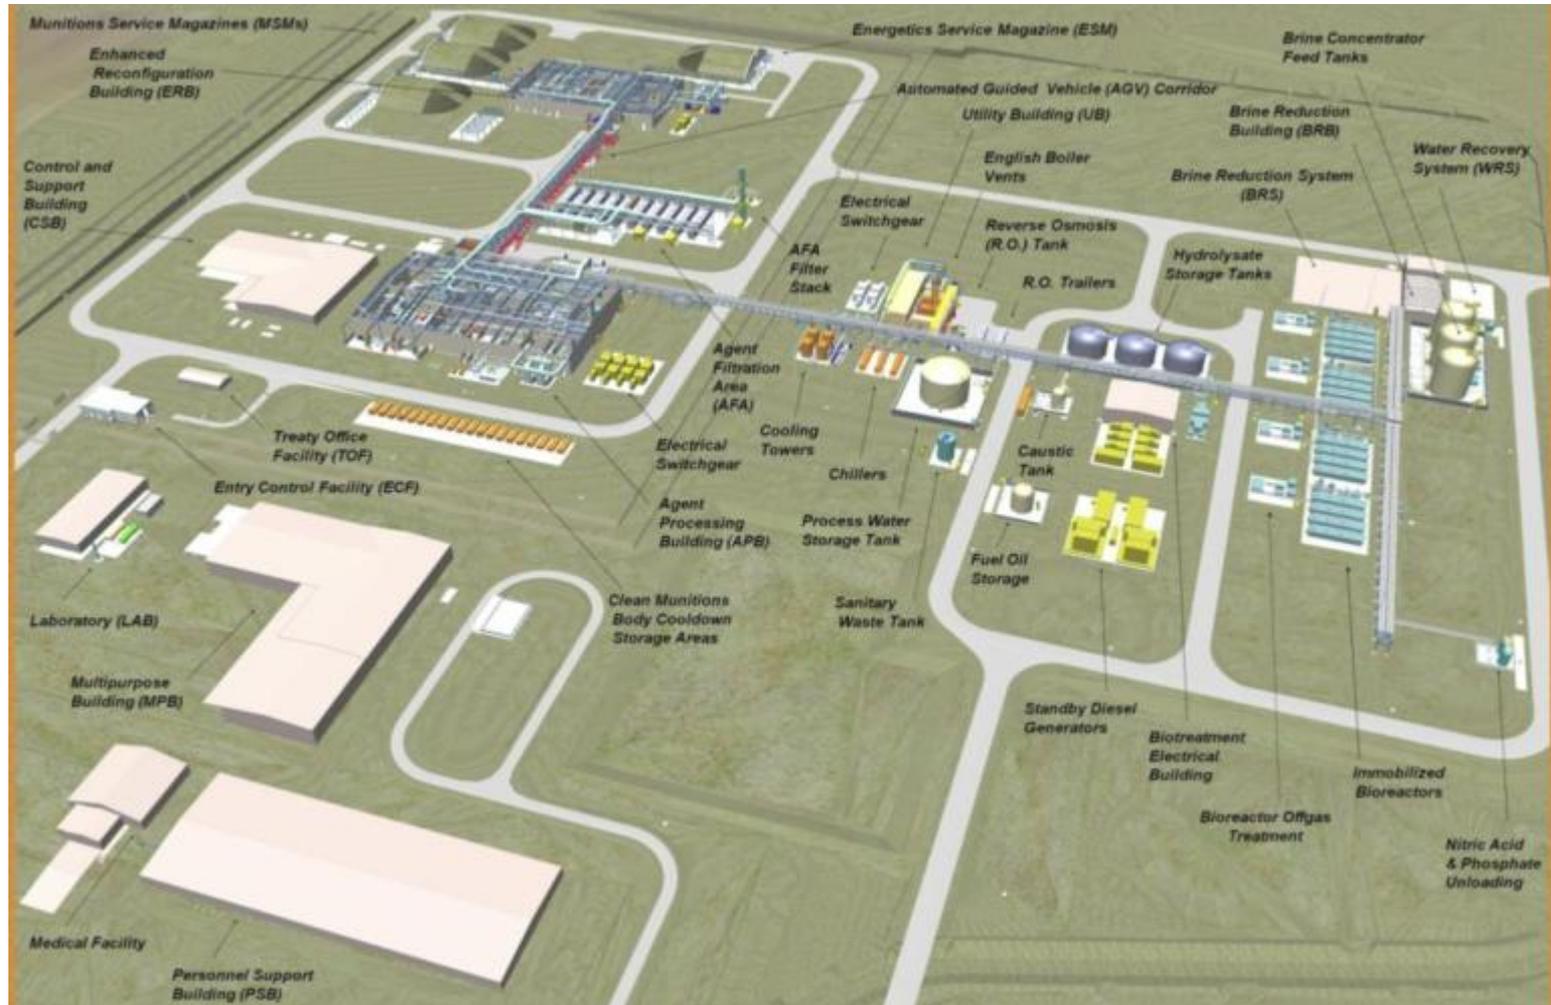

- The Army's Explosive Destruction System (EDS) will augment the Pueblo pilot plant's automated destruction technology
- EDS will be used to destroy problematic munitions that are unsuited for automated processing

- EDS uses explosive “cutting” charges to access the chemical agent inside a munition; neutralization chemicals are then added to destroy the chemical agent

Pueblo Chemical Agent-Destruction Pilot Plant—Site Plan

PCAPP Site Overview

Northwestern Corner - Observation Point

- | | | | |
|----------|--|----------|--|
| 1 | Enhanced Reconfiguration Building | 5 | Agent Filtration Area |
| 2 | Automated Guided Vehicle Corridor | 6 | Munitions Service Magazine |
| 3 | Agent Processing Building | 7 | Control and Support Building |
| 4 | Biotreatment Area | 8 | Munitions Service Magazine Corridor |

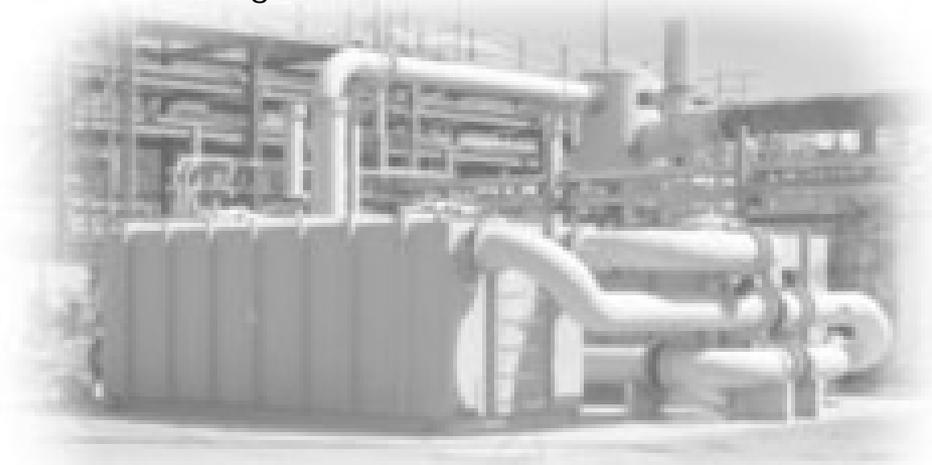

Turnover to Operations

As the project transitions from systemization to operations, the following systems have been turned over:

Systems

Toxic Storage and Spent Decon
Bulk Chemical Storage and Distribution
Security Essential Power Supply
Laboratory Ventilation System
Site Water System
Chilled Water System
Reverse Osmosis System
Process Water System
Instrument Air and Plant Air
Natural Gas
Fuel Oil System
Sanitary Waste
Enhanced Reconfiguration Building/Agent
Processing Building Material Handling Systems

Munitions Unpacking and Projectile Disassembly
Lighting System
Steam and Condensate System
Breathing Air System
Communications System
Residue Handling*

*Newly added

To learn more about Systemization, watch the video at
http://www.peoacwa.army.mil/info/video/systemization_yt.html

Turnover to Operations

As the project transitions from systemization to operations, the following facilities have been turned over:

Facilities

Biotreatment Electrical Building
Brine Reduction System Facility
Analytical Laboratory
Medical Facility
Multipurpose Building
Personnel Support Facility
Utility Building

To learn more about Systemization, watch the video at
http://www.peoacwa.army.mil/info/video/systemization_yt.html

Handing Off the Munitions

Depot and PCAPP employees practice receiving inert munitions during a training exercise. The employees retrieve munitions from an igloo, complete necessary paperwork, then load them into a modified ammunition vehicle for transport to buffer storage where they await processing.

PCAPP expands in Industrial Park

PCAPP Business Services staff have new office space. Located at 1 Jetway Ct. in the Airport Industrial Park, the Pueblo Economic Development Corporation has leased the building to PCAPP and is just down the street from the PCAPP Training Facility.

Media Day at PCD/PCAPP

Lt. Col. Michael Quinn, depot commander, answers questions from reporters during Media Day on Jan. 29. PCAPP and the PCAPP Explosion Destruction System were showcased during the event. Articles appeared in more than 260 outlets worldwide.

Science Fair at Central High School

Nine PCAPP employees volunteered their time Jan. 30-31 to judge approximately 200 science projects during the Pueblo City Schools Science Fair at Central High School. Projects were created from students in the 7th grade through high school.
