

PCAPP

PUEBLO CHEMICAL AGENT-DESTRUCTION PILOT PLANT

COMMITMENT AND CONTINGENCY PLANNING

PCAPP Mission

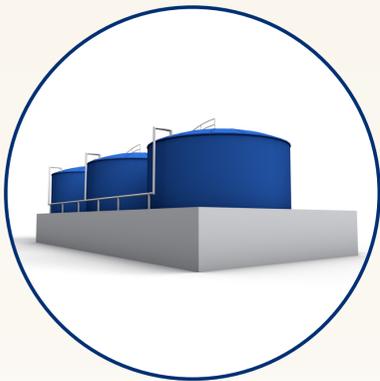

Destroy chemical agent stockpile stored at U.S. Army Pueblo Chemical Depot

Current Plan

Treat agent hydrolysate on site in Biotreatment Area (BTA)

Contingency planning was initiated for the potential, though unlikely possibility the BTA experiences a failure. Contingency planning includes numerous options, including those highlighted below:

Increasing Hydrolysate Storage

- PCAPP has a 30-day hydrolysate storage capacity
- Additional tanks could be added to address the possible need for additional storage

Off-Site Shipment of Hydrolysate

- Temporary or permanent off-site shipment of hydrolysate could be used to maintain successful plant operations
- Would require the construction of the proposed loading dock/shipment terminal

A PARTNERSHIP FOR SAFE CHEMICAL WEAPONS DESTRUCTION
